OPEN DAY PROGRAMME ON 24 AND 25 SEPTEMBER

EUCYS 2017 is open to all visitors:

On **24 September 9:30-17:00**

On **25 September 9:30-16:30**

Workshops take place in the public area:

On **24 September 10:00-15:00**

On **25 September 10:00-15:30**

Try out in the public area any time during these days:

Psychobus

"Psychobus" goal is to bring the knowledge of scientific psychology closer to peoples' everyday lives. In our Brain Lab workshop we guide the participants through examining their brain by using simple and more advanced devices and then explain the results about the mechanisms of this mysterious organ. How easy is it to fool our sense of reality? How difficult is it to adapt to new sensory experiences? How different is our perception of the world compared to others? In addition, Psychobus offers anyone the opportunity to experience virtual reality first hand. Why are psychologists using VR? Come and find out!

Rocket 69

Try out a true "Rocket69" TV-show experience! Do you know what it takes to turn a toothbrush into a robot? What about building a racing car from a block of wood? Or how to save a Lego minifigures' life as it escapes from a landing capsule? Fast fingers will be challenged in tower building and brains will get to struggle with mathematics puzzles. Prizes for the best! The tasks are prepared and presented by "Rocket69" TV Show Science Team - this means an opportunity to get the authentic and awesome feeling of participating in the "Rocket69" show! Visit alone or with friends and prove everybody that you are the best!

Space for children

Tartu Observatory, University of Tartu Old Observatory and Energy Discovery Centre from Tallinn introduce different activities designed for schoolchildren (study sessions and days for schools, resources for teachers and science clubs, etc.), show different activities and exhibits and also provide information about how to pursue a career in space science in Estonia.

NGO Robotika

NGO Robotika is going to make two different exciting workshops in the EXPO area. The first one is meant for children under 10 years, where they can build and program a LEGO WeDo cross kart. Older students can build a tractor pull robot and challenge each other. Prizes for best teams!

GLOBE

GLOBE is an international environmental learning and science oriented program for school children of all levels dedicated to investigative studying and practical skills. GLOBE has a vision of promoting investigative studying and supporting collaboration between students, teachers, and supervisors. The GLOBE booth will introduce the activities of the program, and its benefits to both students and teachers. Measuring equipment will be introduced and demonstrated indoors by measuring indoor environmental parameters. We will explain what happens to the data and how it helps NASA and NOAA scientists in their research projects. An emphasis will be on the importance of regular daily weather measurements, the technologies involved will be explained, and an example data set will be recorded. Participants will get to try their hand at collecting data and how the equipment works. Together we will answer the question: "How can you join the GLOBE program?"
